

VJD Dotfile Standard

By Val D

These are all the packages used in the `setup.sh` file associated with the VJD Dotfile. Meant for [Fedora 42](#) based Linux Distributions. Note that by running the install script, you agree to the terms and conditions and or licenses that may be attached to packages being installed.

Package Name	Command(s)
kitty	<code>sudo dnf install kitty</code>
waybar	<code>sudo dnf install waybar</code>
rust + cargo	<code>sudo dnf install rustup rustup-init</code>
pip	<code>sudo dnf install python3-pip</code>
git	<code>sudo dnf install git</code>
hyprland	<code>sudo dnf install hyprland</code>
hyrpaper	<code>sudo dnf copr enable solopasha/hyprland sudo dnf install hyrpaper</code>
hyprlock	<code>sudo dnf install hyprlock</code>
hypridle	<code>sudo dnf install hypridle</code>
fastfetch	<code>sudo dnf install fastfetch</code>
pipewire/pulse audio (Sound)	<code>sudo dnf install pipewire pipewire-pulse wireplumber pavucontrol</code>
brightnessctl	<code>sudo dnf install brightnessctl sudo usermod -aG video \$USER</code>
XWayland	<code>sudo dnf install xorg-x11-server-Xwayland</code>
nwg-dock-hyprland	<code>sudo dnf install nwg-dock-hyprland</code>
nwg-look	<code>sudo dnf install nwg-look</code>
graphite-gtk-theme	<code>git clone https://github.com/vinceliuice/Graphite-gtk-theme.git</code>
